

## SAFETY VALVE & GENERAL VALVE OVERHAUL & SERVICING

We can provide valve overhaul and servicing, be it as a one-off or as part of a regular maintenance program. A wide variety of valves can be catered for, from a safety valve to a complex control valve. Experienced staff and workshop with in-house pressure test rigs caters for the repair of any brand, style or size of valve. With access to OEM parts, all this contributes in enabling us to provide an excellent service backed up with a detailed valve report & test certificate. If needed, we can offer an on-site commissioning service too.

A typical overhaul would include;

- ✓ Valve strip-down & assess the valve.
- ✓ Advise the client of any serious issues or spares that are required that are not included within a standard spares kit.
- ✓ Shot blast relevant parts & re-paint.
- ✓ Clean the internal trim & ensure seating surfaces are acceptable.
- ✓ Fit new spares kit
- ✓ Set & calibrate if required.
- ✓ Issue valve report / test certificate.

Before

After

Safety valve capability;

- ✓ Supply complete new safety valves
- ✓ Overhaul existing safety valves
- ✓ Calibrate and certify
- ✓ If required, supply new flange gaskets so the valve is ready for installation
